

PROFILE

A senior software engineer doing web development for more than 7 years focusing primarily on Ruby on Rails, deployment and software tooling.

EXPERIENCE

Senior Software developer, GitHub, Remote 2020-Present

I work on improving the Ruby infrastructure used at GitHub. This allows me to work on open source software I care about improving GitHub which is used to power a lot of the projects that inspired me when I began learning to code.

Independent contractor 2019-2020

Out of a desire to see a wider variety of code and develop new skills, I moved into working on a contract basis for a number of companies. I was able to work for a small company founded by friends, a self proclaimed “lifestyle company” that raised no capital, and a podcast company using an open source tool I maintain.

Senior Software Engineer, Procore, Santa Barbara, CA 2016-2019

At Procore I took on a number of roles. Originally working as a product engineer I improved the quality and safety tools used by construction companies to keep their employees safe. After that I was curious about API development and helped launch their first public API. As Procore was growing so quickly, I became interested in helping with infrastructure and scaling, so I helped Procore move from a private datacenter to AWS.

Software Engineer, Invoca, Santa Barbara, CA 2014-2016

At Invoca I worked on improving analytics in real time call metrics. We improved both the call volume we were able to handle and the ability to understand why and how we were receiving different calls.

Software Developer Intern, Lesson Planet, Santa Barbara, CA 2013

Improved the search tools used by Lesson Planet to improve the teachers’ ability to teach common core requirements to students.

EDUCATION

Westmont College, Santa Barbara — Bachelors, 2014

SKILLS

Ruby, Ruby on Rails, Javascript, Typescript, Elm, Rust, HTML, CSS
